

PACE-TRACK

Tracking Pair Solution

PACE-TRACK is a simple, cost-effective critical space control solution developed to meet the space demands in healthcare applications. With PACE-TRACK, patient safety and comfort is achieved by maintaining a flow offset between a single supply valve and a single exhaust valve. This low-maintenance, flexible solution can be combined with various valve technologies to meet the needs of your unique critical spaces.

Start-up and commissioning is made easy by a sole connection between valves using our Room Information Network (RIN). A single BACnet drop to either the supply or exhaust valve allows for room visibility and control via the Building Automation System.

FEATURES

- + Simple tracking pair solution for critical spaces
- + Leverages volumetric flow offset control to meet room pressurization requirements
- + Room pressure control with environmental control or monitoring such as temperature, humidity, CO2 or VOC's
- + Flexible valve options using Venturi Valves, Venturi FX Valves or terminal units
- + Intuitive start-up and commissioning software allowing for complete room configuration
- + BACnet MS/TP
- + BTL Certified

TYPICAL APPLICATIONS

Isolation Rooms

Operating Rooms
