## Introducing Our New High-Performance Plastic: POLYMAX

Our latest UV test results confirm that **POLYMAX** sets a new benchmark for durability and appearance in air diffusers.

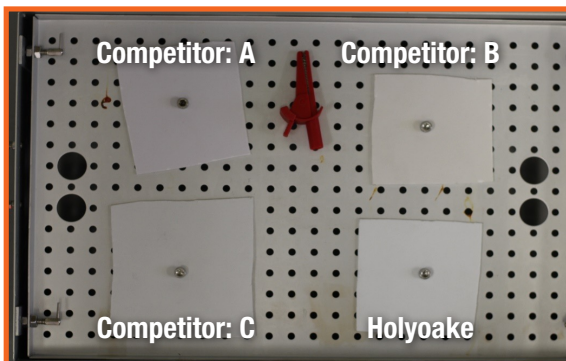

- **Bright from the Start:** POLYMAX begins whiter than both our current ABS material and previous versions.
- **Market Leader:** POLYMAX resisted yellowing for a longer period than other materials in the industry. Even after six years of exposure, it retained a lighter, more stable colour.

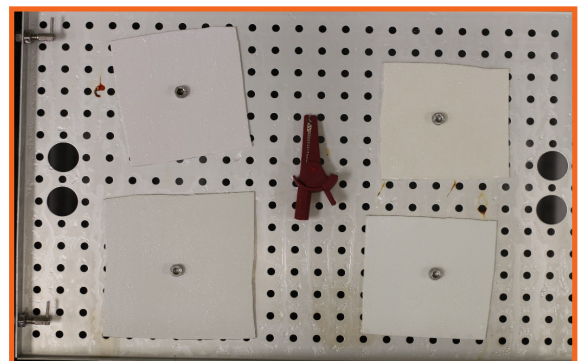

- **Superior UV Resistance:** After three years of simulated UV exposure, POLYMAX demonstrated significantly slower yellowing compared to our current ABS material.
- **Long-Term Stability:** Testing from six to eleven years showed minimal further colour change, indicating exceptional durability.
